Detect fake bearings:

Be aware of product piracy

Sometimes they are badly refurbished originals no longer meeting quality standards, sometimes they are just fake. Tons of low-quality bearings are labeled with false brand markings to justify a higher price. They look like, and are marketed as, genuine, premium brand products. Even the packaging is skillfully imitated. So we're face it, fake bearings are difficult to detect. They won't be scratched, rusty or dirty. They won't necessarily even be cheaper. But still beware of those "too good to be true" prices that are below market value and have unusual availability.

One effective way to identify counterfeit bearings with certainty is with the help of premium brand manufacturers. Companies participating in the WBA assist you and local law enforcement with information and identification of counterfeiters, to help find and prosecute counterfeiters.

And please keep in mind: All suspicious activities need to be communicated first to the premium brand manufacturer and the authorities before you contact your distributor or supplier. Sharing suspicions with them may lead to destruction of evidence and hiding of information, putting investigators at risk.

Our advice:

- Don't try to identify fake bearings on your own
- Contact the premium brand manufacturer instead
- Take photos and gather information of suspected counterfeit products
- Don't contact those who might be involved in illegal counterfeiting activities
- The best way to safeguard authenticity is to buy from trusted sources

New: Check for counterfeits with the WBA app

Recognize fake bearings in just seconds

Fake bearings are a threat to the safety of both people and equipment. They are the cause of costly downtimes and repairs, destroying productivity and incurring huge expenses. The "Stop Fake Bearings" initiative of the World Bearing Association (WBA) helps you recognize fake bearings thus helping you to protect your employees, your equipment and your reputation.

An app for revealing fakes

It isn't easy to spot fake bearings. They can look like original products and their packaging is often an exact copy. But there is now a way to easily perform a quick initial check. The WBA Check app is recommended by leading international manufacturers such as JTEKT (Koyo), NACHI, NTN, HSK, Schaeffler (INA-FAG), SKF, and Timken.

Download the WBA app now.

How does it work?

The QR codes take you to the App Stores where you can download the WBA app at no cost.
